

ICPC HUE Community Progress Report

JANUARY – MAY 2026

From a bold winter launch to seven fully-formed competitive teams, the ICPC HUE community has built something extraordinary in just five months. This report captures the complete journey — platform launches, elite mentorship events, intensive training, official competitions, and the exceptional numbers that prove a new era of competitive programming has arrived at Horus University.

January: The Launch & Preparation

CHAPTER 1 — FOUNDATION

January marked the cornerstone of everything that followed. The ICPC HUE community announced a strong, determined return for the new season with the launch of the **Winter Camp** — a structured program designed to develop students' problem-solving skills, prepare them for upcoming competitions, and connect those skills to real-world opportunities at major tech companies like Noon. This was not just a warm-up; it was a declaration of intent.

The Winter Camp served a dual purpose: reigniting the competitive spirit of returning members while opening the door wide for newcomers. Registration was opened specifically to target new students who wanted to start their competitive programming journey from scratch, while simultaneously confirming the spots of previously registered members in preparation for the camp's intensive schedule. The result was a growing, energized community united by a shared goal.

Winter Camp Launch

A structured program to develop problem-solving skills and prepare students for upcoming competitions and tech career opportunities.

Newcomer Registration

Open registration targeting new students starting from scratch, while confirming spots of returning members.

Community Building

Connecting students to potential job opportunities at major tech companies and fostering a culture of excellence.

The January foundation was critical because it set the tone for everything that followed. By welcoming both experienced competitors and absolute beginners under the same banner, ICPC HUE established itself as an inclusive yet ambitious community. The Winter Camp wasn't just about solving problems — it was about building identity, momentum, and a shared sense of purpose that would carry the community through the intense months ahead.

March: Platform Evolution

CHAPTER 2 — INFRASTRUCTURE

March witnessed a qualitative leap in the platform's infrastructure. The community didn't just grow — it evolved. The **icpchue.com** platform underwent a major transformation, becoming a fully-fledged competitive programming training ground capable of serving hundreds of students simultaneously. Every update was designed with one goal: remove every barrier between a student and their next breakthrough.

650 Problems Added

A massive library of programming problems was added to the platform, categorized into three distinct difficulty levels — Level 0, Level 1, and Level 2 — to suit everyone from absolute beginners to seasoned professionals. This single update transformed icpchue.com from a community hub into a comprehensive training platform.

New Registration System

A completely new and smoother registration system launched at **icpchue.com/register**, supporting university email verification and an active Achievements system that rewards student progress and keeps them motivated throughout their journey.

Three-Level Problem System

Level 0 — Beginner

Fundamentals, data types, loops, arrays, and basic algorithmic thinking for students starting from zero.

Level 1 — Intermediate

Functions, recursion, sorting, searching, and introductory data structures for developing competitors.

Level 2 — Advanced

Complex algorithms, dynamic programming, graph theory, and advanced problem-solving for elite competitors.

The platform updates in March were more than technical improvements — they represented a commitment to quality and scalability. By categorizing 650 problems across three levels, the community ensured that no student would ever hit a wall due to lack of appropriate challenges. Beginners could start confidently at Level 0, while advanced competitors could push themselves at Level 2. The new registration system with university email support added a layer of authenticity and community trust, while the Achievements system introduced gamification elements that kept students engaged and motivated to climb the ranks.

March: The Biggest Orientation Day

CHAPTER 2 — EVENTS

On **Thursday, March 12**, the Faculty of Artificial Intelligence hosted what would become the most significant on-ground event in ICPC HUE's history. The Orientation Day brought together hundreds of students and a lineup of elite champions and founders from **ACPC DU**, one of Egypt's most decorated competitive programming programs. These weren't just speakers — they were living proof of what dedication and structured training could achieve.

Elite Champions as Mentors

The event featured six distinguished speakers: **Eng. Assem Gado**, **Eng. Hossam Hassan**, **Eng. Belal El-Babli**, **Eng. Omar Badr**, **Eng. Anas Al-Harigi**, and **Eng. Abdo Selim** — all founders and champions of ACPC DU. They shared their personal journeys, competition strategies, and hard-won lessons from the competitive programming arena, giving students a rare glimpse into the mindset of champions.

Impeccable Organization

The event was organized under the generous sponsorship of **Dr. Basma Mostafa** and **Dr. Yasser El-Awady**, supervised by **Eng. Fatima Magdy** and **Eng. Raafat Mohamed**, and excellently managed by the **AXIS team**. Their combined effort ensured a seamless, professional experience that set a new standard for student-led events at the university.

The Orientation Day was a pivotal moment for the community. Having champions from ACPC DU — a program with a proven track record of producing world-class competitors — speak directly to ICPC HUE students sent a powerful message: the path to the ICPC World Finals was real, and it started right here. The event didn't just inspire; it provided a concrete roadmap, showing students exactly what it takes to compete at the highest levels and what support structures they could rely on along the way.

March: Training & Community Engagement

CHAPTER 2 — TRAINING

While the platform grew and the Orientation Day inspired hundreds, March also saw the launch of hands-on, live training that brought the community together in real time. The commitment to practical, accessible education became the hallmark of ICPC HUE's approach — no student would be left behind.

17hrs

Completed hours of live streams explaining programming fundamentals, covering everything from basic syntax to algorithmic thinking.

650

Problems on Platform

Programming problems available across three difficulty levels, ready for students to practice and improve.

1

Leaderboard Champion

Mustafa Kamal crowned the first ICPC HUE leaderboard champion, winning an official t-shirt for topping the rankings.

Leaderboard Challenge

To drive engagement and foster healthy competition, ICPC HUE announced a **Leaderboard Challenge** — awarding an official ICPC HUE t-shirt to the highest-rated competitor on the platform. The challenge sparked immediate action, with students pushing themselves to solve more problems and climb the rankings. **Mustafa Kamal** emerged as the first champion, earning the t-shirt and setting the standard for competitive excellence within the community.

Telegram Training Group

Alongside the live streams, the community launched an official **training Telegram group** to facilitate real-time communication, resource sharing, and group formation. This channel became the heartbeat of daily community interaction — a place where students asked questions, shared solutions, celebrated breakthroughs, and supported each other through the toughest problems. The group also served as the primary tool for dividing students into training groups based on their skill levels and progress.

April: ECPC Announcement & Team Formation

CHAPTER 3 — COMPETITION

April was the month of decision. All the preparation, training, and platform building culminated in one clear objective: forming the strongest possible teams to represent Horus University in the **ECPC (Egyptian Collegiate Programming Contest)**. The community shifted into high gear, with every session, contest, and announcement focused on this singular goal.

1

University Qualifiers

Internal contests to identify and form the strongest teams from Horus University.

2

ECPC

Egyptian Collegiate Programming Contest — the national stage for university teams.

3

ACPC

Arab Collegiate Programming Contest — representing Egypt at the regional level.

4

ICPC World Finals

The ultimate destination — competing against the best university teams in the world.

The official ECPC announcement outlined the full competition roadmap, giving students a clear vision of the journey ahead: from University Qualifiers to ECPC, then ACPC, and ultimately the ICPC World Finals. An intensive **3-month training period** was announced to prepare teams for each stage. ECPC registration officially closed on **April 30**, marking the end of the enrollment phase and the beginning of the final sprint.

To support students through this critical period, the community hosted a dedicated live stream to answer all questions regarding ECPC rules, team formation requirements, and training expectations. Additionally, the **Functions and Recursion sessions** were successfully uploaded to the platform's dashboard, ensuring that students had on-demand access to key educational content even outside of live sessions. These resources were essential for students who needed to balance competition preparation with their academic schedules.

April: Contest Champions Crowned

CHAPTER 3 — CONTESTS

Two official contests in April served as the proving grounds for team formation. These weren't just practice runs — they were high-stakes competitions that determined which students would represent Horus University at ECPC. The results crowned champions, revealed hidden talent, and gave coaches the data they needed to build balanced, competitive three-member teams.

First Contest — 1st Place

Ebrahim Matar dominated the first contest, demonstrating exceptional problem-solving speed and accuracy to claim the top position and cement his place as a cornerstone of the ECPC team lineup.

First Contest — 2nd Place

Ahmed Waleed secured second place with a strong, consistent performance throughout the contest, showcasing both technical depth and the composure needed for high-pressure competition.

First Contest — 3rd Place

Noha Kamal claimed third place in the first contest, rounding out the podium and proving that ICPC HUE's talent pool runs deep across all participants.

The **Second Contest**, held on **Tuesday, April 14**, served a different but equally important purpose: finalizing and officially approving the three-member teams. With the rankings from both contests in hand, coaches could make informed decisions about team composition, balancing individual strengths, problem-solving styles, and compatibility. The result was a set of officially approved teams ready to enter intensive ECPC preparation with full confidence in their lineup.

ECPC Registration Closed — April 30: All teams officially registered and ready to compete. The countdown to ECPC has begun.

May: Academic Progress — Level 0 Track Complete

CHAPTER 4 — EDUCATION

May crowned the educational efforts of the entire season. The **Newcomers Training Roadmap** — a carefully structured curriculum designed to take students from zero to competition-ready — reached its near-completion milestone. Every session was delivered, every concept was covered, and hundreds of students now possess a solid programming foundation built to last.

01

Data Types & Conditions

Understanding variables, data types, and conditional logic — the absolute bedrock of all programming.

03

arrays

Working with indexed data structures, traversal, and fundamental array manipulation techniques.

05

functions

Modular code design, parameter passing, return values, and building reusable problem-solving components.

02

Loops

Mastering iteration patterns, loop control, and the art of writing efficient repetitive logic.

04

strings

Text processing, string manipulation, and the patterns that appear constantly in competitive programming.

06

recursion

The gateway to advanced algorithms — understanding base cases, recursive calls, and tree-like problem structures.

All six core sessions of the Level 0 track have been successfully completed, covering the full spectrum of foundational programming concepts. Only the **Math & Geometry** session remains to complete the entire track — a final module that will round out the newcomers' toolkit with the mathematical foundations essential for competitive programming success.

Special Thanks

A massive thank you to **Ahmed Waleed** for his extraordinary effort in delivering these sessions. His dedication to helping students build a solid programming foundation has been instrumental in the success of the Level 0 track and the growth of the entire community.

May: Platform Statistics — Exceptional Performance

CHAPTER 4 — ANALYTICS

The numbers tell a story that words alone cannot capture. Based on **Cloudflare analytics** for icpchue.com, the platform has achieved unprecedented levels of engagement and traffic. These are not just statistics — they are proof that a thriving, active, and growing community of competitive programmers has taken root at Horus University.

4.13K

In the last 30 days — students actively engaging with the platform daily.

179K

In the last 30 days — reflecting deep, sustained platform usage.

224

Average unique visitors per day in the last 24 hours — consistent daily engagement.

The traffic patterns reveal a community in constant motion. With **1.24k unique visitors in the last 7 days** and **224 visitors in the last 24 hours**, the platform maintains strong daily engagement. The request-to-visitor ratio indicates that students aren't just visiting — they're actively solving problems, accessing sessions, and deeply engaging with the content. **23.56k requests in the last 24 hours** alone demonstrates the intensity of daily platform usage as teams ramp up their ECPC preparation.

Social Media Impact — Facebook Dominance

CHAPTER 4 — COMMUNITY REACH

The ICPC HUE Facebook page became a powerhouse of community engagement over the last 90 days (February 1 - May 1). These analytics prove that our message is resonating far beyond our immediate circle.

46.3K

(+428.9% increase)

9.6K

70.1%

(viral reach)

Winning Content Strategy

Visual content dominated: 54% multi-photo posts, 41.4% single photo posts

May: 7 Teams Ready to Compete

FINAL CHAPTER — THE ROAD AHEAD

The journey that began in January with a Winter Camp announcement has culminated in something remarkable: **7 official teams** totaling **21 students** fully prepared and ready to represent Horus University at ECPC. This is not just a number — it is the result of months of dedication, infrastructure building, elite mentorship, and relentless training.

4 Teams — Level 1

Four teams formed from the Level 1 track, representing students who have built intermediate-level skills and are ready to compete at the ECPC level with confidence.

3 Teams — Level 2

Three teams formed from the Level 2 track, representing the most advanced competitors in the community — students prepared to tackle the hardest problems on the competition stage.

21 Students Total

Twenty-one competitors across all seven teams, each one trained, tested, and officially approved to represent Horus University in the ECPC.

"In just a few short months, the ICPC HUE community has proven that it is not just a standard student activity, but an integrated tech entity with a powerful platform, professional training, and teams fully prepared to sweep the ECPC competitions!"

The ICPC HUE community has built something that will outlast any single competition season. A platform with 650 problems. A training curriculum that takes students from zero to competition-ready. A Telegram community of hundreds. Seven teams carrying the flag of Horus University. The foundation is solid, the momentum is real, and the road to the ICPC World Finals runs directly through this community. The season is just beginning. 🔥

Platform

icpchue.com with 650 problems, Achievements system, and smooth registration.

Training

Level 0 track nearly complete, 17+ hours of live streams delivered.

Teams

7 official teams, 21 students, ready for ECPC.

Community

4.13k monthly visitors, thriving and growing every day.

Financial Report: Operations & Event Costs

TRANSPARENCY & INVESTMENT

Building ICPC HUE required strategic investments in both digital infrastructure and on-ground community events. This financial report details every expense, demonstrating the commitment to creating a world-class competitive programming platform and experience.

1. Digital Infrastructure Expenses

 (Exchange rate: 52.5 EGP per USD)

Description	USD	EGP
23/12/2025: Server Hosting (VPS-1)	\$5.59	293.48 EGP
24/01/2026: Server Hosting (VPS-1)	\$5.59	293.48 EGP
18/02/2026: Server Hosting Upgrade (VPS-2)	\$8.78	460.95 EGP
25/02/2026: Official Domain Registration (icpchue.com)	\$11.48	602.70 EGP
May 2026: Server Hosting (New Addition)	\$14.00	735.00 EGP
Subtotal		2,385.61 EGP

2. On-Ground Event Expenses (Orientation Day - 12/03/2026)

Costs for organizing the introductory day and student preparations at the university

Description	Amount
Student Gifts (Chocolate)	420.00 EGP
Platform Logo Stickers	238.00 EGP
Promotional Flyers	500.00 EGP
Logistics (Balloons & Transport)	160.00 EGP
Subtotal	1,318.00 EGP

Financial Summary

Total Digital Platform Costs	2,385.61 EGP
Total On-Ground Event Costs	1,318.00 EGP
Grand Total	3,703.61 EGP

Meet the Team

THE PEOPLE BEHIND ICPC HUE

ICPCHUE's success is built on the dedication and expertise of our talented team members. From visionary leadership to experienced instructors, each member plays a crucial role in shaping the future of competitive programming at Horus University.

Academic Supervision & Support

- Dr. Basma Mostafa
- Dr. Yasser Elawady
- Eng. Fatma Magdy
- Eng. Raafat Mohamed
- Eng. Sara

Leadership

- AbdelRahman Mohsen El-Shahat – Owner
- Youssef Mohamed Salah El-Din – Co-Founder
- Ahmed Waleed – The Lead

Platform Developing

- Youssef Mohamed Salah El-Din – Main Dev

Instructors

- Ahmed Waleed – Lead Instructor
- Ibrahim Matar – Co-Lead Instructor
- Omar El-Shayyal – Instructor

Monitors

- Noha – Lead Monitor
