

— A Report to the Academic Supervisor

The ICPC HUE Community

Season 2025/2026 Highlights

A student community that trains Horus University students in competitive programming and prepares them for the global ICPC. In one season: 16 teams at the ECPC qualifiers, the first competitive programming contest hosted in the Damietta region, and a full training platform built by our students. Here is what we need to continue.

16

teams represented Horus at ECPC

+800

650

problems across 3 levels

+290

software updates to the platform

About the Community

Who we are, and why this work deserves support

ICPC HUE is a student community founded in the Faculty of AI that serves all faculties of Horus University. We train students over a full season (one academic year) to compete in the ICPC.

The idea is not new: after ECPC in Egypt asked every university to form a student team to train its students, almost every participating university now has a community like ours. We are Horus University's community, active since November 2025, and we want Horus to hold a permanent place among these universities.

What is the ICPC?

The largest and oldest university programming contest in the world. Students compete in teams of 3 from the same university, sharing one computer, to solve a set of programming problems in 5 hours. The team that solves the most problems in the least time wins. Teams advance through these stages:

What do we study? Problem Solving

We take a logic problem and turn it into a correct, fast program. A simple example: you have 4 sticks of different lengths. Can you form a square with them? Given the lengths **8 6 11 12**, the answer is no, because the sides are unequal. Given **8 8 8 8**, the answer is yes.

As students progress, problems get harder and require algorithms and data structures such as STL, binary search, dynamic programming and graphs, and the solution must run in a fraction of a second on huge inputs.

```
// Input: 8 8 8 8
read a, b, c, d
print(a == b && b == c && c == d)
// Output: true
```

Why does it matter?

For the student

- **A filter for employers:** the contest shows who truly codes well and understands hard topics.
- **A path to a job:** interviews at companies such as Noon and the global FAANG companies are built on Problem Solving questions, which are hard to pass without training.
- **A stronger CV:** competing and working in committees is real experience for the CV.

For the university

- **Horus in the results:** the university's name appears in the contest rankings alongside every university in Egypt.
- **In-demand graduates:** students with a strong foundation in programming and logical thinking, which the job market seeks.
- **Sustainable activity:** today's contestants become tomorrow's instructors, passing experience from one cohort to the next.

— A fixed system repeated every season

How we train, and how we organize ourselves

We follow the same plan every year: a student starts from zero and ends up on a team ready for the ECPC qualifiers.

The weekly training cycle

Sessions can reach two per week at busy times. Training runs through the first and second terms and the summer. Topics change by stage and student level, with regular practice contests followed by team-formation contests.

Our goals

- Train our registered students all season so they reach the contest ready.
- Help them access job opportunities and build a CV through our activities.
- Build training tools for Horus University not available at other universities.
- Increase the number of Horus teams reaching the advanced ECPC stages each year.

Training levels

- **Level 0:** programming language basics for complete beginners.
- **Level 1:** intro to competitive programming: STL, binary search and two pointers.
- **Level 2:** advanced contest-level algorithms and data structures.
- Students are grouped by level and progress.

4 committees, each member chooses their own

No member is assigned to a committee. Each student picks the role that fits their skills, so they stay more committed.

1 • Instructors

They teach the weekly sessions, solve problems step by step and prepare the sheets. They need deep understanding, academic integrity and patience with beginners.

2 • Mentors

Each mentor follows a small group closely, contacts students who fall behind, and tracks their progress and status so they keep solving.

3 • Media

Presentations, videos (Premiere and After Effects) and posts that document student achievements and attract new members.

4 • Organizing Committee

Booking labs with university administration, running offline events and contests, and handling printing and supplies. It currently has 11 members.

How we formed the committees: in two phases

Phase 1: the technical core. We interviewed the top 5 teams from the ECPC qualifiers (4 from AI and one from Engineering). Each candidate studied a topic such as STL in 5 days and then taught it to the community, supervised by Eng. Fatma Magdy, Eng. Sara Lotfy and Eng. Raafat Mohamed.

Phase 2: the "Hire Up" campaign. We opened applications to all Horus students via icpchue.com/job for Media and Organizing, and received 50 applicants.

— November 2025 – March 2026

What we achieved last season: the beginning

Key milestones in order, from our first announcement in November 2025 to Orientation Day in March 2026.

+500

during the season

21

students completed training
by season end, in 7 teams

16

teams represented Horus
at the ECPC 2026 qualifiers

+22

hours of recorded sessions
available on the platform

- 26 – 28 Nov 2025** ● **Community launch and registration:** the first competitive programming community in the Faculty of AI. Over 300 students registered in the first days, and the platform launched on 28 Nov.
- 7 Dec** ○ **Live opening session** with over 160 students; we closed the form after requests passed 250.
- 8 – 12 Dec** ● **Admission camp:** kickoff session (8 Dec on Telegram), Conditions and Control Flow (9), IF / ELSE & SWITCH (10), review and problem solving (11), and the admission exam (12 Dec).
- 14 Dec** ○ **Platform walkthrough video** after the latest update, showing students how to use it.
- 20 – 26 Dec** ○ **Winter camp:** session on 20 Dec, first sheet and a submission guide video (24 Dec), the leaderboard went live, and recordings of all four sessions uploaded to the platform (26 Dec).
- 1 – 2 Jan 2026** ● **Programming 1 camp:** a full course review and a live problem-solving stream, with the recording uploaded before the faculty exam on 3 Jan.
- 3 Jan** ○ **Official launch of the learning platform** with an intro video: instant judge, side-by-side input and output, session library and leaderboards.
- 26 Jan** ○ **Team returned after exams** and announced the winter break camp.
- February 2026** ● **Team officially registered** with Student Affairs under the supervision of Dr. Basma Mostafa and Dr. Yasser El-Awady. The 650-problem curriculum was completed, the Verdict Helper extension launched (9 Feb), and we registered icpchue.com (25 Feb).
- Until 6 Mar** ○ **17 hours of live streams** in Level 0: data types, loops, arrays and functions.
- 12 March 2026** ● **Orientation Day** in Hall H403, Faculty of AI, our first official offline event (details on page 7).

— March – October 2026

What we achieved last season: from training to competition

From team formation to the ECPC qualifiers, then preparing for the new season.

- 14 – 15 Mar ○ **One-step registration** at icpchue.com/register replacing the form, and the start of the **T-shirt challenge** for the leaderboard's top spot.
- 2 – 4 Apr ○ **Explaining the ECPC**: its stages, rules and fees; honoring Mostafa Kamal as March champion (3 Apr); and a live Q&A stream (4 Apr).
- 7 Apr ● **First ICPC HUE contest** for team formation in Lab E425, Faculty of Engineering: Ibrahim Matar, then Ahmed Waleed, then Noha Kamal.
- 10 Apr ○ **Live Functions session**, and the Functions and Recursion sessions uploaded to the platform.
- 14 – 30 Apr ● **Second team-formation contest** in Hall A209 (14 Apr); ECPC registration closed on 30 Apr with 7 teams: 4 from Level 1 and 3 from Level 2.
- May 2026 ○ **Beginner track sessions completed**: data and conditions, loops, arrays, strings, functions and recursion.
- 12 May ● **ECPC local qualifiers at the faculty** under the patronage of Prof. Dr. Ibrahim Saber, Chairman of the University Board of Trustees, with 6 teams.
- Summer 2026 ○ **Level 1 training** with Time Complexity and STL 1 sessions on the platform, and a month of intensive review of advanced topics before the qualifiers.
- 26 Jul – 9 Aug ● **Hosting the DCC contest** organized by ACPC DU: registration until 29 Jul, online round 31 Jul, final at the faculty 6 Aug, winners announced 9 Aug.
- 17 – 25 Aug ● **ECPC qualifiers**: our teams announced (17), travel to Alexandria (18), 16 teams represented Horus for the first time (24), and the qualifiers trip post (25).
- 23 – 27 Aug ○ **Arabic FAQ page** about the ICPC on the platform, and the volunteer portal icpchue.com/job.
- September 2026 ○ **New season preparation**: interviews with the top 5 teams to select instructors and mentors, the mentor dashboard (2 Sep), the daily study log (8 Sep), and moving sessions to YouTube.
- 23 – 24 Sep ○ **Honoring the 2025/2026 Board**, and the “Hire Up” campaign to join the 2027 season team, which received 50 applicants.
- 2 October 2026 ● **Level 0 registration opened** for the new season on the platform.

— December 2025 – August 2026

The 14 sessions we taught this season

Each session with the day it was taught and its content. Dates come from Telegram channel and Facebook page announcements, and the recording's publish date on the platform.

 on the platform across 3
camps

+17
hours of live stream

for Level 0 up to 6 Mar 2026

+22
**hours of recorded
teaching**

 available to students
anytime

#	Day	Session	Content
1	Mon 8 Dec 2025	Data Types & I/O	First session of the admission camp: input/output, arithmetic operations and data types. Live stream at 10 PM.
2	Tue 9 Dec	Condition & Control Flow	if / else, comparisons and logical operators, and switch / break / continue, with contest applications.
3	Wed 10 Dec	IF / ELSE & SWITCH	How a program makes decisions and picks the right path, and switch case for multiple cases.
4	Thu 11 Dec	Revision + Problem Solving	Review of the first 3 sessions and 3 Codeforces problems, before the admission exam on Fri 12 Dec.
5	Sat 20 Dec	Time & Space Complexity	First session of the winter camp: 6 problems from Sheet 1 and Sheet 2, plus complexity and choosing the faster solution.
6	Thu 1 Jan 2026	Programming 1: Full Revision	The full Programming 1 syllabus in one recorded session, before the faculty exam on 3 Jan.
7	Thu 1 Jan (evening)	Programming 1: Exam Training	Live stream solving questions: exam ideas and the pitfalls students face while writing code.
8	Fri 2 Jan	Exam Training (cont.)	Live stream at 1 PM continuing the previous day's stream, one day before the exam.
9	Fri 10 Apr	Functions	Half an hour of ECPC Q&A, then Functions with a review of earlier topics. Live stream at 8:30 PM.
10	Apr (posted 29 Apr)	Recursion	Recursion, the base case, and solving problems the recursive way.
11	May 2026	Arrays & Ad-Hocs	1D and 2D arrays, and how to approach ad-hoc problems.
12	May 2026	Complexity	Big-O, and estimating a solution's running time from the constraints before writing it.
13	May 2026	Contest #3	A live contest under time pressure, followed by a solution review with students.
14	Aug (posted 3 Aug)	STL 1	First Level 1 session: vector, pair, set and map, in preparation for the ECPC qualifiers.

In addition: Level 0 live streams for the new cohort in Feb and Mar 2026 on the training group (data types, loops, arrays, functions), and an ECPC Q&A live stream on 4 Apr. Sessions 11, 12 and 13 were taught on the training group and published on the platform before June 2026.

On the ground

Orientation Day, team-formation contests and the local qualifiers

Three offline milestones at Horus University that turned online training into a real community and ready teams.

1 • Orientation Day • Thu 12 Mar 2026 • 12 – 2 PM • Hall H403

Our first official offline event at the Faculty of AI. We explained what ICPC HUE is and how students use Codeforces and our platform, with stories and advice from ACPC DU champions:

Eng. Assem Gado • Eng. Hossam Hassan • Eng. Belal El-Babli • Eng. Omar Badr • Eng. Abdo Selim

Sponsored by Dr. Basma Mostafa and Dr. Yasser El-Awady, supervised by Eng. Fatma Magdy and Eng. Raafat Mohamed, and organized by the AXIS team. Community T-shirts and platform achievement stickers were handed out.

Attendees and speakers at the close of Orientation Day.

2 • Team-Formation Contests • Tue 7 and 14 Apr 2026

The first ICPC HUE contest, Lab E425, Faculty of Engineering.

Two 3-hour contests open to all university students: individuals found teammates and existing teams tested their chemistry. The first was in Lab E425, the second in Hall A209.

1st place	Ibrahim Matar
2nd place	Ahmed Waleed
3rd place	Noha Kamal

They were preceded by a live stream answering ECPC questions (4 Apr); official registration closed on 30 Apr.

3 • Local ECPC Qualifiers • Tue 12 May 2026

Held at the Faculty of AI **under the patronage of Prof. Dr. Ibrahim Saber, Chairman of the University Board of Trustees**, with the support and guidance of Prof. Dr. Hossam El-Din Mostafa, Dean of the Faculty, and supervised by Dr. Basma Mostafa, Cybersecurity Program Coordinator, and Dr. Yasser El-Awady, Robotics and Intelligent Systems Program Coordinator.

6 teams of 3 students competed, supported by Eng. Anas Al-Harigi and Eng. Abdo Selim, ACPC Damietta coordinators.

Participants with faculty members at the local qualifiers.

The first competitive programming contest in the Damietta region

DCC 2026: the real start of competitive programming in Damietta

DCC (Damietta Competitive Contest) is the first competitive programming contest in the Damietta region. It was fully designed and run by ACPC Club Damietta University (ACPC DU) and hosted by Horus University at the Faculty of AI; our community helped with media, contest-day management and the website. The goal: a first real step for competitive programming in the region, and preparing students for ECPC.

Over 100 contestants from 5 communities at the DCC final, hosted by the Faculty of AI at Horus University.

5

university communities

MNU • HUE • DELTA • DU • NDETI

+100

contestants

9,000

EGP in prizes

for the top 5 teams, and CSkilled coupons for all

9th

our team's rank

in the online round

26 Jul

Registration opened on dcchub.xyz with a teaser campaign built on the "Millennium Gem" story.

29 Jul

Registration closed.

31 Jul

First round, online.

6 Aug

Offline, face-to-face final at the Faculty of AI, Horus University.

Prizes

3,000, then 2,100, 1,500, 1,200 and 1,200 EGP.

Honoring the winning teams at the DCC final.

Our role: hosting the contest at the faculty, media coverage, helping manage contest day, and developing the official website dcchub.xyz (Yousef Mohamed). Hosting was supported by Prof. Dr. Hossam El-Din Mostafa, Dean of the Faculty, supervised by Dr. Basma Mostafa and Dr. Yasser El-Awady, with Eng. Fatma Magdy, Eng. Sara Lotfy and Eng. Raafat Mohamed.

Partnerships with other university communities

ACPC Club Damietta University

Organizers of DCC; joined us at Orientation Day and the local qualifiers.

ICPC Port Said University

A community with an ECPC bronze-medal team; supports our advanced teams with experience.

ICPC Assiut University

One of Egypt's largest communities; helped with our roadmap and training instructors.

Horus University's first participation

16 teams at the ECPC 2026 qualifiers in Alexandria

For the first time, 16 teams represented Horus University at the ECPC qualifiers at the Arab Academy for Science, Technology and Maritime Transport, including the teams ICPC HUE trained all season.

The Horus University delegation with the university flag on the Arab Academy campus in Alexandria.

Some of the team profile cards we published on 17 Aug: UNIT01 · ENTROPY · TOUCH BUG · INFINITE LOOPS · A_S_M.

A month before	Intensive review of advanced topics, and completing official registration.
Preparation	We requested the bus, booked student housing in Alexandria, and organized the full trip schedule.
18 Aug	Travel from Horus University to Alexandria, with group activities for the teams.
Next day	Practice contest, testing the machines and contest environment, and collecting team T-shirts.
Qualifier day	The official contest: 12 problems in 5 hours.

On the way to Alexandria, and one of our teams inside the contest hall.

12
problems in 5 hours

3
problems solved by most of our teams

4
problems by our top team
one problem short of qualifying

What does the result mean? Most of our teams started competitive programming from scratch this season, and our top team came within one problem of qualifying for the next stage. This shows the curriculum works; the next step is to start 5-hour practice contests earlier so we qualify in 2027.

Why did we need our own platform?

The icpchue.com platform: solving problems every student faced

Problem: In most communities, sessions are recorded and posted a week later. Students jump between YouTube, Telegram groups and the crowded Codeforces site, and the instructor cannot tell who solved and who stopped.

Solution: One platform for explanations, problems, editor, judging and follow-up, built 100% by community students, with open-source code on GitHub. We know of no other Egyptian university with its own training platform like this.

+800

registered students

daily active students
solving on the platform

650

problems in 3 levels
a full one-season curriculum

263

trainees in the mentor
dashboard
154 of them active (October
2026)

Student dashboard: the first thing they see on login.

Student Dashboard

- **Students lose track of where they stopped:** the current sheet, its progress and a "Continue solving" button at the top.
- **Dropping off goes unnoticed:** a 3-month submission heatmap and a daily streak counter.
- **Progress is scattered across sites:** platform solves and Codeforces rating in one place.

Problem Page: everything on one screen

"Area of a Circle" from the first sheet: statement and examples on the right, editor on the left.

- **Switching tabs breaks focus:** the statement and a VS Code-grade editor on one screen, supporting C++, Python, Java and C.
- **Waiting in judge queues:** a Judge0 judge on the community server runs code instantly and returns AC / WA / TLE / RE.
- **"Wrong Answer" with no explanation:** input, expected output and the student's output side by side, so they find the bug themselves.
- **Code lost between devices:** every attempt auto-saved to the student's account.
- **Beginners struggle with English:** in-page hints and explanations in Arabic.

A clear path from the first line of code

650 ordered problems, and every session in one place

Problem: New students don't know where to start or what to solve after each session. Online problems are many and unordered, so they quit within weeks. **Solution:** A curriculum split into levels, each level into sheets, each sheet tied to a session, plus a roadmap showing where the student stands at any moment.

The three levels: Beginners, Level 1, and advanced Level 2.

"Data Types and Conditions" sheet: 26 problems and the student's progress bar.

Level	Problems	Topics (roadmap prepared with the Assiut ICPC community)
Level 0: Beginners	249 in 10 sheets	Data types and conditions, loops, arrays, strings, functions, math and geometry, recursion, and general problems at three difficulty tiers.
Level 1: Intermediate	226 in 8 sheets	Time complexity, STL containers and sorting, binary search and two pointers, sliding window, Bitmask, number theory, and prefix sums.
Level 2: Advanced	171 problems	Advanced contest-level data structures and algorithms.

Roadmap: the student's progress in each topic.

STL 1 session: the video inside the platform with a topic description.

Missed sessions used to be lost

A student who missed a session waited a week for it to be posted in a group. Now **12 recorded sessions** across 3 camps live on the platform, each with its sheet on the same day.

Videos were heavy on weak connections

In September 2026 we moved all sessions to YouTube (unlisted), played from inside the platform, so they load fast on any connection.

Keeping students going

Leaderboard and achievements: training as a game

Problem: The hardest part of competitive programming is consistency. Over 500 students registered with us, only 21 made it to the qualifiers, and most who stopped lost motivation in the first weeks. **Solution:** A full motivation layer: rankings that update with every problem, badges to earn, and real-world prizes.

#	USERNAME	SOLVED	ACCEPTED	SUBMISSIONS
1	عبدالله شطا	160	185	371
2	Mohamed Gabr	136	142	172
		136	152	237
		131	141	180
		100	104	207
		98	98	181
		81	83	127
		36	36	36

Leaderboard: students ranked by accepted solves in training sheets, with a second tab for Codeforces rating (names hidden).

Achievements: welcome badge, Level 0 completed, first sheet solved, and +500 rating.

Daily streak and consistency heatmap on the student dashboard.

Students don't know how they rank among peers

Two leaderboards: platform sheets and global Codeforces rating. Since 24 Dec 2025 we post the weekly leaders.

Competition without prizes fades fast

Since 15 Mar 2026, first place wins an ICPC HUE T-shirt. Mostafa Kamal, March's champion, won it (3 Apr).

Digital achievements go unseen

Each achievement unlocked earns a laptop sticker; the first batch was handed out on Orientation Day, 12 Mar.

Dropping off starts with one day

A streak counter and consistency heatmap reveal any gap, so students return before falling behind.

From "Did you solve it?" to data-driven follow-up

Mentor Control Center: we know where every student stands

Problem: In the first season, mentors asked in the group "Did you solve it?", only noticed a student had stopped weeks later, and couldn't tell if a solution was original or copied. **Solution:** In September 2026 we added a dashboard for mentors and instructors showing each student's real data: what they solved, when, how many attempts, and how much they studied.

263

registered trainees
in the mentor dashboard

154

active
active this week

109

inactive
absent 7+ days, so the
mentor reaches out

3

integrity flags
for manual review

Mentor Control Center: search and filter by level and activity, with a card per trainee showing curriculum progress (names hidden).

Trainee profile: 185 problems solved, 371 submissions, 21 study hours, and a yearly activity heatmap.

Daily study log: the student records progress, and the mentor adds notes.

No one knew how much a student studied

A daily log of study hours, work done and resources, started 8 Sep 2026; only the current day is editable.

Reviews were guesswork

Instructors see each student's code and every attempt's verdict, so review sessions target the most frequent real mistakes.

Copied solutions

Automatic flags for accepted solves under 15 seconds or heavy code pasting, so progress stays genuine.

Continuous engineering work

A platform that evolves weekly, on a professional tech stack

Problem: A platform used daily by hundreds of students must not go down during contests, must not put their data at risk, and must change quickly as new needs arise. **Solution:** Continuous development since November 2025, driven by feedback from students, instructors and mentors, on a professional tech stack.

Platform Development Timeline

27–30 Nov 2025	Visual identity and a verified registration system.
10 & 25 Dec	Student dashboard, then our own code execution engine.
5 & 11 Jan 2026	Platform security and a new mobile-friendly interface.
9 Feb	Version 3.0: the 650-problem curriculum and the Verdict Helper extension launch.
16 Mar	Platform open-sourced, then the new editor and analytics.
22 Apr	Team registration system for ECPC.
June	Automatic sync of solved problems from Codeforces.
23 & 27 Aug	Arabic FAQ page on ICPC, and the /job volunteer portal.
2 – 22 Sep	Mentor dashboard and study log, the 12 sessions moved to YouTube, and our own judge on Azure.
2 Oct	New code-verified registration for Levels 0 and 1, season 2026/2027.

Reach and Visibility

Platform traffic (Cloudflare, May 2026)

4.13K visitors and 179K requests in 30 days, 1.24K visitors in 7 days, and 224 visitors in a single day.

Facebook (1 Feb – 1 May 2026)

46.3K views, up 428.9%, with 70.1% from non-followers.

LinkedIn and YouTube (December 2025)

Project updates reached 4,002 members with 6,789 impressions; videos got 1,910 views and over 10 hours of watch time.

Student data security

Encrypted personal data, per-table permissions, protection against repeated attacks, university-email sign-up, and Terms and Privacy pages.

Platform Tech Stack

Frontend and backend

Next.js and TypeScript, with a PostgreSQL database on Supabase, and an installable mobile web app.

Code execution and judging

A Judge0 judge hosted on our own Azure server, supporting C++17, C, Python and Java.

Codeforces integration

Our own proxy service and the Verdict Helper extension auto-sync solved problems and all attempts.

Security and performance

Cloudflare protection, SSL encryption for all data, and error logging to catch issues as they

Open source

The full code is on GitHub under AGPL-3.0; any student can review or contribute.

Ready to scale

Designed to serve other universities; our next goal is to offer it to all Egyptian universities

Annual Roadmap

The ICPC Path 2026/2027: Season Phases

A 7-phase curriculum taking students from programming basics to team selection and competing in ECPC.

Phase	Period	Technical Content and Key Milestones
Phase 1: Outreach & Orientation	29 Aug – 9 Oct 2026	University marketing campaign, application form, interviews, orientation day, and opening session.
Phase 2: Programming Basics	16 Oct – 26 Nov 2026	Variables, loops, arrays, strings, functions, time complexity (Big-O), and weekly practice contests.
Phase 3: STL & Winter Checkpoint	27 Nov 2026 – 29 Jan 2027	vector, stack, queue, set, map, priority_queue; Warm-up Contest: 29 Jan 2027
Phase 4: Problem-Solving Techniques	5 Feb – 19 Mar 2027	Frequency arrays, two pointers, binary search, greedy algorithms, recursion, and backtracking.
Phase 5: Advanced Algorithms	26 Mar – 30 Apr 2027	Math 1 & 2, Dynamic Programming 1 & 2, and Graph Algorithms 1.
Phase 6: Team Formation & Selection	24 Apr – 18 Jun 2027	Internal team trials, the official Team Selection Contest (TSC), and announcement of approved teams.
Phase 7: Final ECPC Preparation	22 Jun – 15 Aug 2027	Intensive weekly 5-hour contests, a full contest simulation, and the goal: ECPC 2027.

* Unless stated otherwise, technical sessions are held on Fridays at 8:30 PM. Dates are estimates and may shift with Horus University's official academic calendar.

Full Operational Schedule

2026/2027 Season Curriculum and Milestones

All 46 milestones across the academic year, for academic supervision review and implementation tracking.

Academic Schedule 2026/2027: a structured progression across Term 1, Term 2, and Summer.
 46 Scheduled Milestones

Table 1: Term 1 (Basics & STL)		
#	Milestone / Topic	Date
01	Marketing Campaign	29 Aug – 3 Sep
02	Applications Open	5 – 10 Sep
03	Screening & Interviews	12 – 17 Sep
04	Results Announced	18 Sep
05	Orientation Day	26 Sep – 1 Oct
06	Registration Reopens	26 Sep – 1 Oct
07	Opening Session	9 Oct (8:30 PM)
08	Basics & Conditions	16 Oct
09	Loops & Nested Loops	23 Oct
10	Arrays & Functions 1	30 Oct
11	Strings & Characters	6 Nov
12	Midterm Exam Break	7 – 12 Nov
13	Functions 2	13 Nov
14	Time Complexity (Big-O)	20 Nov
15	Practice Contests	21 – 26 Nov
16	Progress Review	Late Nov
17	STL: Vector & Pair	27 Nov
18	STL: Stack & Queue	4 Dec
19	STL: Set & Map	11 Dec
20	STL: Priority Queue	18 Dec
21	Final Exam Break	20 Dec – 21 Jan
22	Warm-up Contest 2027	29 Jan 2027

Table 2: Term 2 (Core Algorithms)		
#	Milestone / Topic	Date
23	Prefix Sum & Frequency Array	5 Feb
24	Two Pointers & Sliding Window	12 Feb
25	Term 2 Registration Reopens	13 – 18 Feb
26	Binary Search	19 Feb
27	Greedy Algorithms	26 Feb
28	Recursion & Brute Force	5 Mar
29	Diagnostic Assessment	6 – 11 Mar
30	Backtracking	12 Mar
31	Bitmask & State Search	19 Mar
32	Number Theory & Math 1	26 Mar
33	Combinatorics & Math 2	2 Apr
34	Dynamic Programming 1	9 Apr
35	Performance Assessment	10 – 15 Apr
36	Term 2 Midterm Break	17 – 22 Apr
37	Dynamic Programming 2	23 Apr
38	Graphs (BFS/DFS)	30 Apr

Table 3: Summer (Selection & ECPC)		
#	Milestone / Topic	Date
39	Team Trials	24 Apr – 6 May
40	Official Selection Contest	8 May
41	Approved Teams Announced	15 May
42	Eid al-Adha Break	16 – 19 May
43	Final Exams Break	22 May – 18 Jun
44	Weekly 5-Hour Mocks	22 Jun – 27 Jul
45	Full Simulation	1 Aug
46	Goal: ECPC 2027	15 Aug 2027

Schedule Summary & KPIs

Total Milestones	46 milestones
Schedule Length	34 academic weeks
Live Training	120+ hours
Mock Contests	8 timed contests
Delivery	Labs + Platform
Primary Goal	ECPC Finals

Monitoring Note

All technical content is reviewed before delivery, and we continuously track attendance, platform submissions, and contest results.

Support Requests for the 2026/2027 Season

7 Specific Requests to Help Us Double Our Results

Training, the platform, and follow-up are run entirely by the community team. What we need from the University are specific facilities we cannot provide ourselves. For each request: the current situation, exactly what we ask, and the expected result.

1 A Fixed Hall or Lab for Sessions

Now: We search for an available room every week, so sessions get cancelled or moved online.

We ask: A hall or lab reserved for us for two hours weekly, at a fixed time throughout the term.

Result: Students know where and when to attend, so they stay committed.

2 A Lab Equipped for Contests

Now: Lab computers have no programming environments, so we ask students to bring laptops.

We ask: Installing C++, Python, and a code editor, and unblocking icpchue.com and Codeforces on the University network.

Result: On-campus contests under the same conditions as ECPC.

3 Attendance Excuses for Events

Now: Events and contests clash with lectures and sections, forcing students to choose.

We ask: An official absence excuse for students in approved events, based on a name list we send in advance.

Result: Students take part without losing academic attendance.

4 5 Minutes for Announcements in Lectures

Now: Many students learn about the community or the contest only when it is too late.

We ask: Faculty approval for 5 minutes at the start of one lecture per cohort, once at the start of each term.

Result: The information reaches all students, not only our page followers.

5 Coordination with the Official Faculty Page

Now: Announcements of our activities are sometimes posted late or with details needing correction.

We ask: A faculty contact person to whom we send the reviewed announcement and details one week before each event.

Result: Official announcements on time and with accurate information.

6 Official Recognition for Students

Now: Contestants and committee members work all year without any recognition from the University.

We ask: Certificates accredited by the University Presidency, activity credits, or consideration of their absences.

Result: Students stay on, and others see that effort is valued.

7 An Activity Budget

Now: There is no budget allocated to the community.

We ask: Support for four items: (1) ECPC team registration fees, 1,500 EGP per team, as other universities such as Damietta do. (2) Printing, certificates, T-shirts, and internal contest prizes. (3) Hospitality at events. (4) Platform hosting and domain.

Result: More teams at ECPC, and events that reflect the University's reputation.

— The Team Behind ICPC HUE

Team and Academic Supervision

Everything in this report was made by these people: from academic supervision and leadership to instructors, mentors, and the Organizing Committee that runs every event day.

Academic Supervision & Support

Prof. Dr. Hossam El-Din Mostafa

Dean, Faculty of AI; supported the Orientation Day, local qualifiers, and DCC.

Dr. Yasser El-Awady

Coordinator of the Robotics and Intelligent Systems programs; has supervised the community since its official registration.

Supervising Engineers: Eng. Fatma Magdy · Eng. Sara Lotfy · Eng. Raafat Mohamed. They followed the events and supervised the instructor and mentor selection interviews.

Leadership

AbdelRahman Mohsen El-Shahat **Founder**

Youssef Mohamed Salah El-Din **Co-Founder & Platform Developer**

Ahmed Waleed **Tech Lead**

Instructors

Ahmed Waleed **Lead Instructor**

Ibrahim Matar **Co-Lead Instructor**

Omar El-Shayyal **Instructor**

Mentors

Noha Kamal · Omar El-Shayyal · Abdullah Shata · Youssef Mohamed

Each mentor follows a small group weekly through the Mentors Dashboard.

Media

Yousef Mohamed

Photography, videos, and posts, joined by new members from the Hire Up campaign.

Organizing Committee (OC) • 11 Members

Abdelrahman Mohamed Elkassas

Salma Ashraf Elkholy

Mostafa Kamal

Noreen Sameh El Shenawey

Eyad

Omar Ahmad Elzahrar

Aliaa Asaad

Mai Saber Qotb

Haneen Hany Adel

Kareem Essam Salama

Ahmad Alsayed Ebrahim

The Competitive Programming Community at Horus University

Faculty of AI • Horus University — Egypt

Our goal is for Horus University to have a lasting tradition in competitive programming, to raise its name in the ECPC and ACPC contests, and to graduate Egyptian software engineers of the highest caliber. Thank you for your time and support.
